EXPERIENCE

SWECHA - AP | TECHNICAL INTERN (CERTIFICATE LINK)

March 2023 – May 2023

- Developed a **SOLAR SYSTEM SIMULATION** project to show the exact simulation of our solar system. It contains interactive elements and comprehensive information about each planet in our solar system.
- In this project, I contributed by developing the user interface using **HTML and CSS**, and implementing interactive **pop-up frames** to display detailed information about the planets in our solar system.

PROJECTS

HR ANALYTICS DASHBOARD [Link](#)

OCT 2025 – Present

- In this project our team has developed a analytics dashboard using **POWER BI** based on the given data to get the insights on like, the rate of attrition in company and the employees job satisfaction feedback etc.
- In this project, I performed **data cleaning and data modeling**, followed by visualizing the processed data using interactive **graphs, KPI cards**, and **matrices** to create an insightful **HR Analytics Dashboard**.

MARKETING CAMPAIGN ANALYSIS [Link](#)

SEPT 2025 – OCT 2025

- Developed a **Marketing Campaign Analysis Report** using the **Power BI** tool based on the provided dataset. This interactive report provides valuable insights such as **total revenue by region, total spend, average ROI, and campaign performance comparisons**. It also helps identify the **best-performing marketing campaign**, enabling data-driven decision-making and effective budget allocation across various marketing channels.
- In this project, I performed **data modeling and data cleaning** by creating calculated columns and measures using the **DAX language**. I then visualized the processed data through various **graphs, pie charts, and other interactive visuals** in Power BI to uncover key insights and enhance decision-making.

PNEUMONIA DETECTION AND CLASSIFICATION [Link](#)

DEC 2023 – Apr 2024

- Pneumonia is a life-threatening disease caused by an infection in the lungs. Early detection is crucial for effective treatment and improved recovery. In this project, our team developed an **Artificial Intelligence (AI) model** designed to **predict pneumonia in its early stages**, enabling timely diagnosis and better patient outcomes.
- In this project, we developed an AI-based pneumonia prediction model by combining **Convolutional Neural Network (CNN)** and **VGG16 architecture** to accurately detect pneumonia in its early stages. The model was trained using a dataset of over **15,000 chest X-ray images**.
- My contributions included **data gathering, data cleaning, and data modeling** to ensure the model could efficiently process and interpret the input data, thereby reducing time complexity. Additionally, I used **Image Data Generation techniques** to reshape and rescale the chest X-ray images, optimizing them for better model performance and training accuracy.

EDUCATION

KL UNIVERSITY

B. TECH

ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Sept 2021 – Jun 2025

Cum. GPA: 9.07 / 10.0

SKILLS

PROGRAMMING

- Python
- SQL
- C#
- JAVA

TECHNOLOGY

- POWER BI
- Data Analytics
- Artificial Intelligence

GLOBAL CERTIFICATIONS

- Google TensorFlow Developer
- Google Cloud Associate Engineer
- Automation RPA
- IBM Python
- WTN .NET Full Stack Developer

HOBBIES

- Exploring New Technologies
- Listening Music
- Playing Games
- Travelling
